

AP Booking POC — How to Test

Matching of invoices against purchase orders and goods receipts, and staging the MIRO document for posting.

Nothing is posted to SAP. Everything is simulated on screen.

Scope

Included

- Read the invoice and the PO
- Find the right PO for each invoice
- Match invoice lines to PO lines
- Check the goods receipt (GRN)
- Check tax, freight and tolerance
- Stage the MIRO document for one-click posting

Not included

- Payments, F110, NACHA, reconciliation (Phase 2)
 - Scanned or handwritten invoices
 - Currencies other than USD
-

Screens

Screen	Purpose
Upload	Add your own POs and invoices
Inbox	All invoices and their status
Match Workbench	How each invoice matched its PO
MIRO Simulation	The staged posting

Screen	Purpose
Exceptions & Audit	Everything held, grouped by reason

Status colours

	Meaning
 Ready to post	Everything matches
 Needs review	Posts, but worth a look
 Held	Quality pending, or over tolerance
 Blocked	No PO reference, or goods not received

Red and orange rows are expected. Those are the cases the system caught.

Test 1 — A normal invoice

Invoice **TX85-01021160** — Motion Industries, \$717.04

Match Workbench

- PO printed as **4741030582-BT04**, read as **4741030582** (suffix removed)
- Invoice item **V3.0730-56** matched to PO item **P-V3073056**
- Invoice prints PO line **X00020**, but goods are on line **00030** — matched on quantity and price (5 @ \$122.80), not the printed reference
- Lines 00010 and 00020 left untouched

MIRO Simulation

- Tax recalculated to **\$54.65**, same as the invoice
- Cash discount \$6.14 shown but not deducted
- Balance **\$0.00**

Click **Post MIRO**.

Test 2 — One PO, two vendors

Invoice **2600498-1** — Bull Customs Brokerage, \$8,811.67 against PO 4745000031

PO 4745000031 was raised on PP Tube Mills for the slitter assembly. The customs broker bills against the same PO.

What to check

- Vendor mismatch is flagged, not treated as an error
- Invoicing party switched to Bull Customs
- \$8,811.67 posted as **unplanned delivery cost** — 3.84% of PO value, inside the 20% limit
- Goods line 00010 not selected (quantity already consumed by the GRN)
- Balance **\$0.00**

The PO has no freight or customs line, so the charges have nowhere else to sit. Adding those lines to the import PO template would remove this at source.

Test 3 — Quality gate

Same invoice, **2600498-1**

1. Click **Post MIRO** → refused, quality pending
2. Go to **Exceptions & Audit** → PO 4745000031 / line 00010 → **Release QM**
3. Return and click **Post MIRO** → posts

In production this status is read from SAP. The button is here so you can see both sides.

Test 4 — Other cases

Invoice	Vendor	What it shows
769984	Freight Solutions	Freight matched exactly. Holdover line \$20,400 left open for a later invoice.

Invoice	Vendor	What it shows
9972782578	Grainger	\$259.69 freight with no PO line — 24% of a small PO, over tolerance.
9021454336	RS Americas	PO says laser sensor @ 156.64, <i>invoicesaysphotoelectric</i> @88.00. Held.
KGC-26-2249	Katoen Natie	No PO number on the invoice. Blocked.
424543	3L Energy	PO field shows their order number, not ours. Blocked.

Test 5 — Your own documents

1. **Upload** → drop in a PO and its invoice together, any order
2. **Process uploads**
3. Check **Inbox** → **Match Workbench** → **MIRO Simulation**

The system works out which file is the PO and which is the invoice.

Goods receipt and quality status are not in the PDFs, so uploaded POs are treated as received and released. To test a hold, change GRN or QM at the bottom of the Upload page.

What is simulated

- Goods receipt and quality status — set in the app, normally from SAP
- GL accounts — illustrative, not your chart of accounts
- The posting — nothing is written to SAP

Open question

Two tolerance limits are in use:

- \$1–2 absolute, applied manually today
- 20% of PO value, from the PO

These behave very differently on a 1,000*POversusa*229,000 PO. The demo currently uses:

Variance	Action
Up to \$2	Post
\$2 to 20%	Flag for review
Over 20%	Block

Please confirm what these should be.

If something looks wrong

Issue	Fix
Inbox empty	Set Documents to show to Both
"Could not read this PDF"	Scanned file — digital PDFs only
"PO not found" on upload	Upload the PO as well
"Already posted"	Click Reset in the sidebar

Anything handled incorrectly — send us the document and what you expected.
